

INTERFACE C VOLTAGE TEST ROD

Medium voltage test rods are designed for accurate cable fault location, phase checking, and cable testing. When installed at the back of a T-body or elbow connector, they enable monitoring of the electrical condition of both the separable connector and the connected power system.

It enables safe and convenient voltage testing of cable accessories and is compatible with CHARDON Separable Connectors **24-FDT630**, **36-FDT630** and **36-LFDT1250**.

Item Code	Description	Voltage Ratings	
KMCD-VTR	Chardon Interface C Voltage Test Rod	Test Rod Type	VTR
		Maximum A.C. Test Voltage (50 Hz – 1min)	36 kV
		Minimum D.C Test Voltage (8 x U _o - 30min)	96 kV
		Impulse Voltage (1.2 x 50 μs)	95 kV
